EQUIPMENT CERTIFICATION

Equipment:	Casing Elevator
Manufacturer:	AOT
Model:	SLX 8$\frac{5}{8}$" CSG
Capacity:	150 Ton
Serial Number:	E31239-139 33969
	MLC-20914 02/2015
Reference:	CCE-8-2

The above elevator was examined in detail on February 17, 2017 at Maple Leaf Consulting's shop. The above elevator was partially disassembled and sandblasted for a C.A.O.D.C. RP-2.0 Level IV inspection. Magnetic particle and/or visual inspections were completed on all accessible areas of the body, door, latch, secondary latch, hinge pin, latch pin, secondary latch pin, latch spring, and secondary latch spring. The unit was load tested to 150% of its capacity and re-inspected. This elevator has not been in service since February 17, 2017.

Based on the inspections and a review of the load test, it is our opinion that the unit is safe to operate within its rated capacity when used in accordance with the manufacturers' specifications and/or industry standards.

In accordance with C.A.O.D.C. RP-2.0, a certification period of 500 operating days is recommended. Due to the nature of Canyon's business, this **certification is valid for a period of 2 years** or until the unit has been damaged structurally by either handling or operation. Unengineered structural modifications to this unit will void this certification.
