EQUIPMENT CERTIFICATION

Equipment:	(4) HYC Elevator Segments
Manufacturer:	AOT
Model:	HYC 7$\frac{5}{8}$"
Capacity:	200 Ton
Serial Number:	MLC-23910-1

The above elevator segments were examined in detail on March 25, 2019 at Maple Leaf Consulting's shop. The units were in a fully disassembled condition. Magnetic particle and visual inspections were completed on all accessible areas of the above segments.

Based on the inspections, it is our opinion that the units are safe to operate within their rated capacity when used in accordance with the manufacturers' specifications and/or industry standards.

In accordance with C.A.O.D.C. RP-2.0, a certification period of 500 operating days is recommended. Due to the nature of Canyon's business, this **certification is valid for a period of 2 years** or until a unit has been damaged structurally by either handling or operation. Unengineered structural modifications to a unit will void this certification.
